

Mission: Zero Sticker Installation Guide

The Central Vehicle Agency is dedicated to the safety of our fleet and the clients we serve. In an effort to raise awareness about the importance of vehicle safety, the CVA is distributing Mission: Zero stickers for all fleet vehicles.

Installation location

The Mission: Zero sticker should be installed below the driver-side mirror and parallel with the door handle.

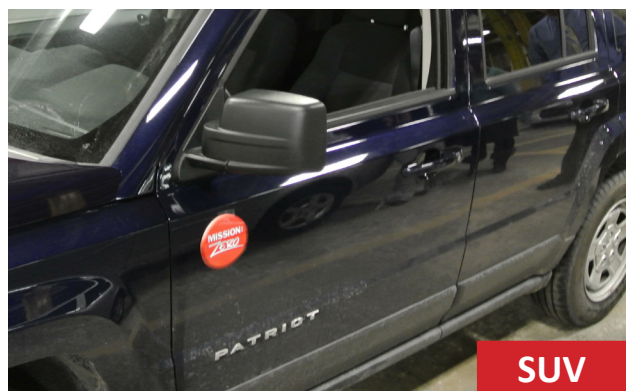

Installation instructions

Clean and dry: Ensure the vehicle surface is clean and dry before installing the sticker.

Temperature: It is recommended that the stickers not be installed in below freezing temperatures. Where possible, allow vehicle surface to warm to above zero degrees in a garage or other environment before installation.

Technique: Use masking tape to position the sticker and hold it in place. Ensure the "mission" text is parallel to the ground. Then, remove backing and adhere to car. Remove masking tape.

Installation for non-flat surfaces

If a curve or other body detail causes a non-flat surface, align the sticker as close as you can taking the elements of the vehicle into consideration.

If you have any questions about the installation of the Mission: Zero stickers, please contact the CVA inquiry line at 1-877-787-6902.
